kushwaharohan2003@gmail.com ◇ linkedin.com/in/rohan9793 ◇ github.com/Pepe9793

OBJECTIVE

An aspiring IT Student with interest in CyberSecurity seeking a full-time job.

EDUCATION

Master of Technnology, Information Technology — Jul 2025 - Present
Madan Mohan Malaviya University of Technology, Gorakhpur

Bachelor of Technology, Computer Science and Engineering — 2021 - 2025
VIT Bhopal University

SKILLS

Technical Skills	C++, MySQL, Digital Forensics, Ethical Hacking, Game Development
Tools	Forensic ToolKit, Magnet Forensics, Unity Engine, Unreal Engine

EXPERIENCE

Internship — Aug 2024 - Oct 2024
Maven Silicon Softech Pvt Ltd — *Bengaluru*
Completed a VLSI Design internship focused on RISC-V processor design using Verilog HDL, gaining hands-on experience in digital circuit design, RTL coding, simulation, and hardware design fundamentals.

PROJECTS

Advance Dork Search It is a single-machine tool to build advanced search queries (Google dorks / open-directory queries) for educational, research, and authorized security testing. It only generates search queries and opens them in your browser, it does not scrape or automate scanning. (Try it here)

Project SLASH: Melee Combat Game Developed a third-person hack-and-slash melee combat game using Unity and C#. Implemented combo-based attacks, player movement, hit detection, health and damage systems, and enemy AI with patrol, chase, and attack behaviors. Used Unity's Animator for smooth combat animations and optimized gameplay for better performance. (Watch here)

ACHIEVEMENTS

IEEE Conference Paper – Real-Time Hybrid DDoS Detection Using Ensemble Machine Learning and Rule-Based Analysis
Published and presented an IEEE conference paper on a real-time DDoS detection framework that combines ensemble machine learning with rule-based analysis for enhanced network security.

- Developed using Python, Scapy, Random Forest, XGBoost, and Streamlit.
- Implemented live network traffic monitoring and real-time attack detection.
- First author and presenter at an IEEE Conference.

IEEE Conference Paper – Transfer Learning-Enhanced Explainable Graph Neural Networks for Memory-Only Ransomware Detection
Developed a transfer learning-enhanced Graph Neural Network (GCN) with Explainable AI (GNNExplainer) for accurate and interpretable detection of memory-only ransomware using the CIC-MalMem-2022 dataset.

- Applied Graph Neural Networks (GCN) with transfer learning for ransomware detection.
- Utilized GNNExplainer to identify key memory-based indicators and improve model transparency.
- Evaluated the framework on the CIC-MalMem-2022 dataset, achieving high detection performance.
